Non-toxic animal repellent and fertilizer that lasts up to 2 years

Keep deer, elk, rabbits, gophers, field mice and voles away from your plants for up to 2 years. Simply place the tablets directly into the growing container with the plant, in the soil at the time of planting or in the soil with root contact in more developed plants. Soil moisture begins to degrade the tablet, allowing the system of the plant to take up the active ingredients. In 4-5 weeks the active ingredients in the plant makes them extremely bitter to pests. Not only do the tablets contain a bitter taste, but they also contain 14-2-2 fertilizer. For annuals, perennials and deciduous plants, the tablets will last one full growing season. For evergreens and slower growing ornamentals they will last two full growing seasons. Not for use on crops. For immediate protection until the tablets take effect, use Repellex™ Liquid (Item No. G70007).

NOTE: Not available for sale in Alabama, Arkansas, Louisiana, Mississippi, Nebraska, Puerto Rico and Washington D.C.
